

# Secure Browser Installation

To download the ANGEL Secure Browser, use this link:

<http://www.gvtc.org/Downloads/SecureBrowserInstallerV3.zip>

After you download the compressed (Zip) file, you will need to extract its contents before you can run the installer.

To extract the installer (in Windows) simply right-click on the Zip file, and then select "Extract All..." from the menu. By default, this will create a folder named "SecureBrowserInstallerV3" in the location where you saved the Zip file.

To begin the installation process, browse to the file named "SecureBrowser.exe", and double-click it. When installing the Secure Browser you will be prompted with two setup types, Complete and Custom.

With ANGEL Secure Browser 3.0, it is recommended that all previous versions of ANGEL Secure Browser be uninstalled before installing version 3.0.

## System Requirements

ANGEL Secure Browser 3.0 requires:

Microsoft Windows XP Service Pack 3; or

Microsoft Windows Vista; or

Microsoft Windows 7

With:

Internet Explorer 9.0; or

Internet Explorer 8.0; or

Internet Explorer 7.0

**NOTE:** Internet Explorer 6 is no longer supported.

## Complete

The Complete installation option will install the Secure Browser in the default location on the computer which (in Windows 7) is "**C:\Program Files (x86)\Angel\SecureBrowser\**". It will also install a desktop icon to launch the program as well as add an entry to the computers Start Menu à Programs section.

# Initial Configuration

After installation, launching secure browser will open the Settings dialog. These settings are stored in an encrypted file called Browser.cfg, which is located in the same directory as the Secure Browser executable.

Because the Browser.cfg file is encrypted, modifying the file directly is not recommended. Always use the Settings screen from within the Secure Browser.

**NOTE:** Once you open the ANGEL Secure Browser you will not be able to copy, paste, or toggle to any other application. We recommend that you write down or print the setting information below so that you can type the correct information into the correct fields on the screen.

## Configuration Settings

Component	Description
Secure Testing URL	The URL of the ANGEL Secure Login Page. Enter " <a href="http://southwestatech.angellearning.com">http://southwestatech.angellearning.com</a> ".
